# Fiber Reinforced Paint SG-2000

### 00-02-001-05 High-Functional Reinforcing Paint

I high-Functional Reinforcing Paint SG, Ltd. has developed a high-func-tional reinforcing paint SG-2000 (puter-pending) consisting of an elastic water-proof paint mixed with fiberglass. This paint features a coating of excellent adhesivity and organized resigns. The paint adhesivity to concrete is over 10 10cm<sup>2</sup>, or excellent characteristics pro-viding an enormous strength comparable to their off-individual comparable. viding an enormous strength comparable to that of tightly adhered iron plates, so

paint, but when the concrete has already been damaged to some extent, a full-scale correction method will be necessary. For example, in the event there is the hazard of frequent surface pecling and fallout, the damaged parts will have to be removed and recoated with mortar, or the cracked parts filled with a waterproof adhesive agent. Up till now, much time, labor and cost was expended for such repairs, and even at that, there was no guarantee that crack-

and application width of 10cm, or dis-played excellent properties.

The company also developed special-purpose peripheral painting equipment, through which the painting term and painting cost are both decreased to less than one-third compared with conven-tional painting methods. A can contain-ing 15kl of the paint is sold at a domes-tic price of about ¥45,000, which is us-able for painting an area of 20m² with a coarting about 1mm thick. A full set of ancillary painting equipment is mat-keted at a price of about ¥1,500,000, \*86, Ltd.
